probable phosphoglucomutase - syphilis spirochete

C;Species: Treponema pallidum subsp. pallidum (syphilis spirochete)

C;Species: Treponema pallidum subsp. pallidum (syphilis spirochete)

C;Date: 24-Jul-1998 #sequence_revision 24-Jul-1998 #text_change 09-Jul-2004

C;Accession: C71327

R;Fraser, C.M.; Norris, S.J.; Weinstock, G.M.; White, O.; Sutton, G.G.; Dodson, R.; Gwn rson, J.; Khalak, H.; Richardson, D.; Howell, J.K.; Chidambaram, M.; Utterback, T.; McD they, L.; Weidman, J.; Smith, H.O.; Venter, J.C.

Science 281, 375-388, 1998

A;Title: Complete genome sequence of Treponema pallidum, the syphilis spirochete.

A;Reference number: A71250; MulD:98332770; PMID:9665876

A;Accession: C71327

A;Residues: preliminary; nucleic acid sequence not shown; translation not shown

A;Molecule type: DNA

A;Residues: 1-632 <COL>
A;Experimental source: strain Nichols

-!- COFACTOR: FAD (By similarity).
-!- PATHWAY: Betaine biosynthesis from choline, first step.
-!- SIMILARITY: Belongs to the GMC oxidoreductase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 556;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HAMAP; MF 00750; -; 1.

Sequence 2, Application US/08100709
Patent No. 5322697
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Donovan, William P.
APPLICANT: Tan, Vuping
APPLICANT: Jany, Christine S.
APPLICANT: Jany, Christine S.
APPLICANT: Gonzalez Jr., Jose M.
TITLE OF INVENTION: PACILLUS THURINGIENSIS CIVETA AND CIVETS
TITLE OF INVENTION: TOXIN GENES AND PROTEINS TOXIC TO LEPIDOPTERAN INSECTS
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
ADDRESSEE: Panitch Schwarze Jacobs & Nadel c/o A.S.
ADDRESSEE: Nadel
                                                          Sequence 2

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2, As Sequen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2, Sequence 2, Sequence 2, Sequence 2, Sequence 11, Sequence 11,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Bactlus thuringiensis cryst4 and cryet5 toxin genes and proteins
toxic to lepidopteran insects.";
Patent number U55322687, 21-4UN-1994.
Patent number U55322687, 21-4UN-1994.
-!- FUNCTION: Promotes Colloidosmociic lysis by binding to the midgut
epithelial cells of many lepidopteran larvae.
-!- DEVELOPMENTAL STAGE: The crystal protein is produced during
                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the spore coat.

RT comparative analysis of the benzolsochromanequione gene clusters.";

R. Microbiology 149:1633-1645(2003)

C. - CATALYTIC ACTIVITY: dTTP + alpha-D-glucose 1-phosphate = diphosphate + dTDP-glucose.

C. - SIMILARITY: Belongs to the glucose-1-phosphate

CC +1 SIMILARITY: Belongs to the glucose-1-phosphate

CC +1 SIMILARITY: Belongs to the glucose-1-phosphate

CC CC Htymidylyltransferase family.
